

EURO MULTI SPRAY GUN #1690

Nickel plated brass body

Aluminum tank

Stainless steel needle

Set up to spray 32 oz./1 Liter Euro bottles
or loose fill

Approximate air consumption: 200-300
L/min

Working pressure: 3-4 bar (max. 10 bar)
40-60 psi (max. 140 psi)

Weight: 1.6 kg/4 1/2 lbs.

Made in Italy

The #1690 Euro Multi-Spray Gun is designed for the spraying of undercoating, protective waxes, soundproofing and gravel protection. This gun is hermetically sealed which prevents the product from hardening during work breaks. The 1690 gun features three adjustments: air flow, product flow, and product atomization. This will enable the user to recreate a wide variety of patterns and structures. This gun is supplied with a set of spray wands to apply wax based rustproofing in doors, cavities beams etc.

Cleaning Directions:

SOLVENT AND WATER BASED PRODUCTS:

The gun is hermetically sealed which allows the product to stay in the tank, without drying out, for a period of one month. We recommend a periodic cleaning depending on the usage of the gun.

To clean, simply fill a clean and empty P7 can with solvent (or water as appropriate) and spray. Follow Federal and Local Hazmat regulations and collect used solvent for proper disposal. If no clean empty canister is available, the solvent (or water) can be poured directly into the tank. Always make sure the air regulator on top of the tank (BS45) and the atomization knob (BS19) are completely closed. Some product may accumulate on the spray cap head (Bs02). This can usually be removed with ones' fingernail. Unscrew the tank and clean the product intake tube and inside the tank, do not immerse the spray gun completely into solvent, but clean with a brush or cloth.

WAX BASED PRODUCTS:

Wax based products sprayed without the wand should be cleaned as in previous directions. When using wands, end the application by purging the leftover product from the wand, by pulling the trigger half way. This is usually enough to clean the wand for future use. When a buildup is noticed, purge the leftover product and spray solvent through the wand.

IMPORTANT

When spraying cleaning solvents with the gun, ALWAYS close the Air Control Knob (BS19) first. Atomized solvents are extremely flammable. Properly dispose of cleaning solvents as per local regulations.
